

# Care Map Template – Diagnosis

This Care Map is created by putting the diagnosis in the centre. It is a snapshot in time as a diagnosis and or condition may change as the child grow and ages. It depends on the diagnosis and or condition and the time it is created what the map will contain.

Families can use this care map

- Understand a diagnosis or condition
- Explain a diagnosis or condition to others
- Prioritize aspects of care
- Create a plan for next steps
- Discuss plans and goals with healthcare professionals

*The mom who drew this care map found it useful to validate her experiences. Seeing everything on one page helped to determine what needed the most attention first. She used her care map in conversations with her child’s specialist to work together on setting priorities regarding the child’s diagnosed needs.*
