

# Care Map Template – Organizations and Supports

This Care maps can be designed to illustrate the systems, organizations and supports involved with a child to give a big picture of who is involved.

The elements suggested here may not apply to everyone. It is recommended that each care map reflect the specific child and family.

*A parent used this type of care map to illustrate all the organizations and supports involved in their child's life. Once the map was drawn it revealed the need for communication between the supports and services about the child's condition. This helped her to put the appropriate communication plans in place.*
