Tuberous Sclerosis

Tuberous sclerosis (TOO-buh-rus skluh-ROH-sus) is a genetic disorder that can cause noncancerous tumors to form in many parts of the body. With TSC, tumors can develop in the brain, eyes, kidneys, heart, lungs, bones, or skin.

Borrow these books from the FCRC or check your local library!

My Life with TSC

Evan Moss

Written and illustrated by 10-year-old Evan Moss, *My Life with TSC* shares his story. He details the daily challenges he faces living with tuberous sclerosis complex.

Princess Katie the Brave: a Story about Living with TSC

Jennifer Flinn

A young happy princess named Katie has TSC. Sometimes she feels different because she goes to the doctor and hospital more often than the other princes and princesses in her kingdom. As Princess Katie learns more about her condition she meets other princes and princesses who also have TSC. She soon discovers that she is not alone and that she doesn't have to feel *weird* just because she has special needs.

My Life and Thoughts with Tuberous Sclerosis Complex

Robin Marie Hudson

This book was written by a young woman living with tuberous sclerosis complex. Diagnosed at 7 months, she has faced many struggles including brain surgery. This story focuses on her life and how she has coped with TSC.
